

Equinefit Made to Measure Saddles

Equinefit Saddlers demand the same exacting standards while building your made-to-measure saddle as you demand of yourself when you ride in it.

Custom worked to your exact requirements. The saddle panel, knee roll, length of flap, girth billets and seat are carefully measured, and you choose from a wide range of leathers and colors.

Materials: Equinefit uses only the highest quality in materials; English leather and pure wool flock. The spring trees are ply-bonded wood and steel, allowing maximum movement with the horse, while providing lasting strength and durability.

Design: Every detail of the saddle is cut by hand and prepared by master saddlers, delivering everything you expect from a top-of-the-line saddle. Even the tree is specially constructed, which allows you to choose a deeper or more open seat.

After sales: Our five-star after sale service is offered to all customers, allowing us to give the best possible service and quality.

Made to Measure Saddles

Personal note from the founder of Equinefit:

As a competitor I needed a large horse to take up my leg because I am 6'8". Finding a saddle that accommodated a large rider and a large horse was no easy task! Consequently, I was forced to ride in saddles that did not fit me.

Why is it integral to have an appropriate fitting saddle? A saddle that fits both the horse and rider correctly, makes it possible for the rider to sit correctly. An ill-fitting saddle makes sitting correctly on the horse impossible.

A correctly fitted saddle is for every rider. It allows their mount to feel safe, comfortable and more willing to respond to its rider's commands, at any level of riding.

In 2004, I turned my efforts to designing saddles that would enhance the rider's comfort and effectiveness. Thus, Equinefit was begun.

Your Saddle - Your Choice

There is a reason to look at our saddles

Dressage Saddles

Our **Equinefit Saddles** are for everyone because each saddle is made-to-measure and designed to accommodate your individual requirements.

Pick the model that most closely matches your needs, then have every feature of that saddle exactly tuned to match your style of riding.

Jumping Saddles

Like our Dressage Saddles, **Equinefit's** custom jumping saddles are also designed to your exact specification. We design every saddle to the personal requirements of you, the rider. Rolls and blocks are carefully measured while you choose the colors and material.

General Purpose Saddles

The design of a GP saddle is the most challenging, because the GP is designed as an "all rounder". We work with the rider using one sample saddle, which allows you to experience the individual feel before fine-tuning the design with your specifications.

During a fitting for a new GP saddle, you are invited to try different panels, blocks and designs, plus a choice of leather color and materials. Because we have unlimited options in size and position, the sample saddles are all designed to demonstrate the options for each rider.

Your Saddle - Your Choice

Ordering Your Custom Saddle

An initial fitting session begins with an evaluation of the horse. **Equinefit** assesses the animal's condition, muscle tone and contours of its back. Your **Equinefit** representative will inquire about your horse's work regime and exercise program. The horse is then examined while being ridden with its current saddle.

We also discuss veterinary issues and possible schooling problems with the trainer, vet or other specialist, to ensure that all considerations are taken into account before the design is chosen.

Equinefit then measures the horse and prepares a template from the horse's back. After this process, the rider's measurements will also be taken. Once all of the specifications of your saddle are finalized, our master saddlers will commence the crafting of your made to measure saddle. The saddle is usually delivered to you within 8 weeks of your order.

An appointment for delivery is made, at which time the saddle will be properly set on the horse and the rider experiences the ability to sit in total comfort.

Contact your **Equinefit** representative now for an appointment.
